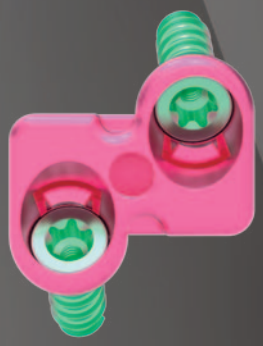
Vytex SA2

STAND ALONE CERVICAL SYSTEM

*Vytex SA2 Interbody Cage is a spinal device that is **implanted in the intervertebral body space via an anterior approach** to improve stability of the spine while supporting fusion. Components are offered in different shapes and sizes to meet the requirements of the individual patient anatomy. Made from additively manufactured titanium alloy (Ti-6Al-4V ELI).*



MAXIMIZE PATIENT OPTIONS

Includes four footprints in eight heights and up to four lordotic angles to provide maximum flexibility in meeting all patient needs.

PROMOTE LONG-TERM STABILITY

Can be used as a stand-alone device when two or more anchor points for inserting titanium alloy bone screws are used to promote long-term stability.

SUPPORT BONE IN-GROWTH

The design and porous structure improves adhesion to vertebral body endplates to support bone-in-growth when used with allogenic bone graft and/or autograft to facilitate fusion.

ROBUST FIXATION OPTIONS

Implanted using a zero-step screw anti-backout mechanism providing visual and audible confirmation of fully seated screws placed in better quality bone along the anterior endplate.

Vytex SA2

STAND ALONE CERVICAL SYSTEM

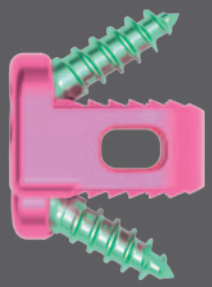
INDICATIONS FOR USE

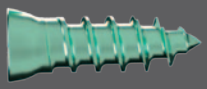
Vytex SA2 Stand Alone Cervical System is **indicated for intervertebral body fusion of the spine in skeletally mature patients who have had at least six months of non-operative treatment.** The device system is designed for use with allogenic bone graft comprised of cancellous and/or corticocancellous bone graft and/or autograft to facilitate fusion. One device is used per intervertebral body space.

Vytex SA2 Stand Alone Cervical System is **intended for use at either one level or two contiguous levels in the cervical spine, from C2 to T1, for the treatment of degenerative disc disease (DDD) with up to Grade I spondylolisthesis.** DDD is defined as back pain of discogenic origin with degeneration of the disc confirmed by history and radiographic studies.

Vytex SA2 Stand Alone Cervical System cages **may be used as a stand-alone device when two (2) vertebral body bone screws are used.**

If the physician chooses to use the Vytex SA Stand Alone Cervical System with fewer than two (2) screws, then an additional supplemental spinal fixation system cleared for use in the cervical spine must be used.





Self Drilling Screws

Diameter: 3.5 | 4.0 mm

Length: 12 | 14 | 16 | 18 mm
